

AQUAMATIC AMV-FB

BOOSTER SET WITH STANDARD CONTROLS

AQUAMATIC AMV-FB

BOOSTER SET WITH STANDARD CONTROLS

OVERVIEW

The Aquamatic AMV-FB range of quality assured cold water pressure booster sets, is designed to increase the pressure of the cold/hot water services within a building where the existing incoming mains or feed tank is not capable of supplying sufficient system pressure. The range incorporates efficient inverter driven variable speed pumps, which continually vary the motor speed to match the changing flow demand pattern, whilst maintaining a constant system duty pressure. This mode of operation, adjusting the pump's motor speed to the building's flow requirements, reduces the power consumption dramatically when compared to fixed speed motor control.

Our AMV-FB 2, 3 & 4 pump sets are manufactured to allow all of the pumps to run together if required. So pumps may be sized with or without a standby pump. All are programmed to run in staged cascade operation as the flow demand increases and similarly as demand decreases. All pumps are assembled on a common base frame with a consumer unit panel and all necessary valves and fittings to ensure ease of installation and efficient, reliable operation.

Features

- Energy Efficient Variable Speed Blueflux® motors exceed EuP IE4 grade
- Transducer Control for long term reliability and accuracy with hydraulic shock system protection
- Automatic Cascade Control for all pumps
- Electronic Low Water Cut-Out Interface for pump dry running protection, with auto re-start upon water restoration
- All components are WRAS approved
- 2 individual BMS Volt Free contacts per pump for run and trip condition
- Built to Latest CE Requirements and in accordance with ISO9001
- 304 Stainless steel pipework as standard
- Individual pump information LED indicator shows pump status: pump running, warning or alarm
- Integral flow-through control vessel (see right)

SPECIFICATION

Cold Water Pressure Booster Pump Set arranged for operation as duty pump with assist standby pump(s) all under efficient variable speed motor control via microprocessor control requiring single/three phase electrical supply (as appropriate - see below). Complete with interconnecting wiring and all necessary valves and fittings which form the suction and discharge manifolds. Manifold mounted flow-through control vessel. All complete on a stainless steel base frame.

Designed, manufactured and tested in accordance with ISO9001 quality assurance procedures, using PED and WRAS approved components suitable for potable water specification. Compliant with all relevant European Community Directives as required by UK law and CE marked.

Automatic variable speed pump motor control for long term reliability and accurate pressure measurement by 392 transducer. Automatic alternations of all pumps to even run times. Sequential pump starting to avoid overloading electric supply. Motor overload protection. Electronic low water protection interface. Individual pump run and fault information LED display.

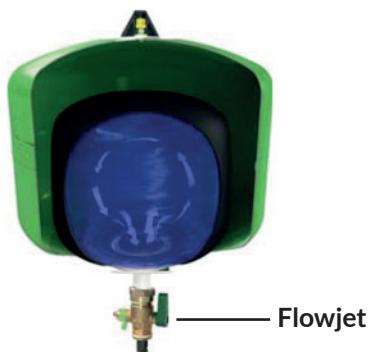

Run and trip volt free outputs available from all pumps.

Finish

Pump bodies are finished in electrophoresis coating. Panel is plastic. Stainless steel pipework is left unpainted for effect.

Control Pressure Vessel

To assist with the constant pressure controls a suitably sized WRAS flow-through design pressure vessel is provided complete with a flowjet combined isolating and drain valve.

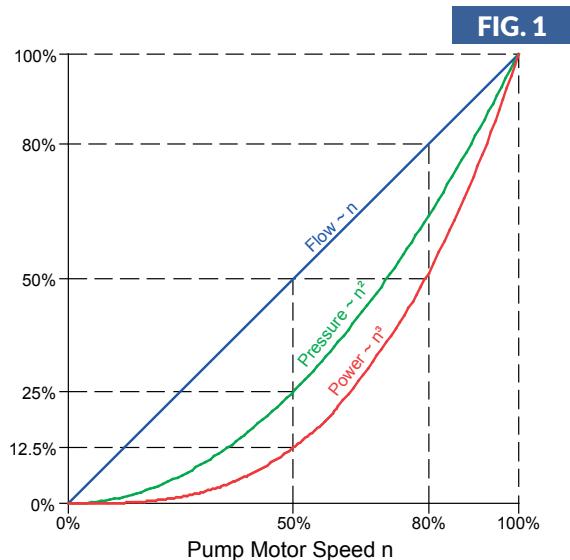

Flowjet - Flow through, shut-off and discharge valve

VARIABLE SPEED PUMPING PRINCIPLE

The basic concept is to alter the pump speed to match exactly the required demand of water to the system, using the principle that flow rate is directly proportional to pump speed. The electricity consumed by the pump motor is proportional to the cube of the pump speed. It can be shown (Fig. 1) that a 20% reduction in flow rate from the peak demand will reduce the power consumed by the motor by 50%. As the flow demand continues to decrease further savings in pump motor power consumption can be achieved.

Not only does this produce a saving in electricity consumption but it also provides other benefits such as reduced strain on the pumpset and system components by excessive pressure and water hammer, smoother and quieter operation through "ramped" acceleration and deceleration of the pump. Also constant pressure output is available where over-pressure could have an adverse effect on the system such as when refurbishing old buildings using the existing pipework or where calorifiers have a limited pressure rating.

AMV-FB OPTIONAL FEATURES & ANCILLARIES

Pipework Material Options

We can supply pump sets with alternative pipe work materials such as; Galvanised, ABS, UPVC, 316 Stainless Steel or Copper. Please contact the sales team for further information.

Flexible Connections

Made from EPDM rubber and WRAS approved for potable water applications, this spherical bellows type flexible coupling joint will absorb pipe movements, isolate vibration, reduce system noise. Gaskets are not required and the joints are easily and speedily installed.

Anti Vibration Mountings

When fitted this turret type mount will isolate the pump package from the ground or floor-mounting surface. The mounting will arrest and reduce pump rotation starting inertia and associated vibration being transmitted through the ground or floor-mounting surface, which could potentially cause a noise problem.

GRP Weather Proof Enclosure

Where internal plant room space is at a premium or where a unit needs to be remotely located this fully encapsulated 25mm pre-insulated GRP enclosure may provide the ideal solution. It is supplied with an internal frost stat, heater, natural vents and access door with Yale lock.

Acoustic Attenuation Enclosure

Although the standard package meets stringent EC noise levels, this enclosure is specifically designed for noise sensitive applications. Typically an insertion loss of approximately 30dB(A) can be achieved in most applications. Enclosures are supplied complete with naturally ventilated acoustic louvres, removable panels for easy pump maintenance and glazed vision panel for viewing pump controls fascia.

Distribution Manifolds

Prefabricated with our proven in-house copper extrusion method. Can be assembled with any number of individual stabbings and combination of isolating, non-return, double check valve & water meters to suit the building installation requirements.

Aquavent

Designed to help assist with the draining down and refilling of pressure boosted water supply pipework by helping to prevent damaging pressure shocks from occurring. Whether a system pipework is drained down intentionally for maintenance or unintentionally as a result of the pressure booster set stopping, either by power interruption or a low water condition there is the potential of pressure shocks when the pressure booster restarts.

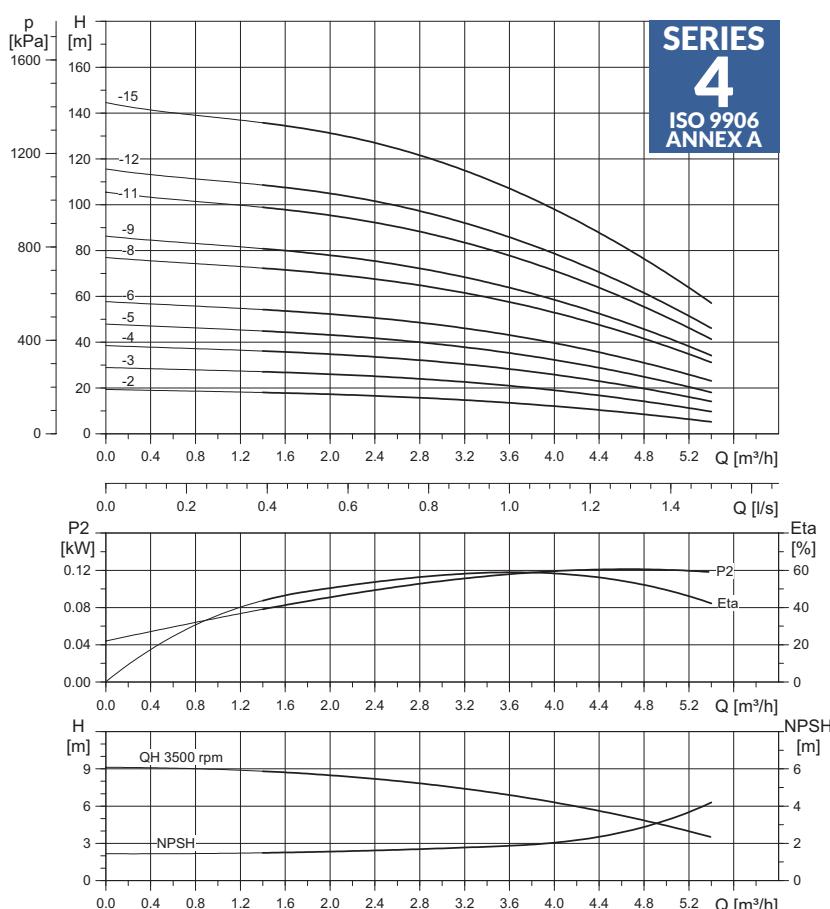

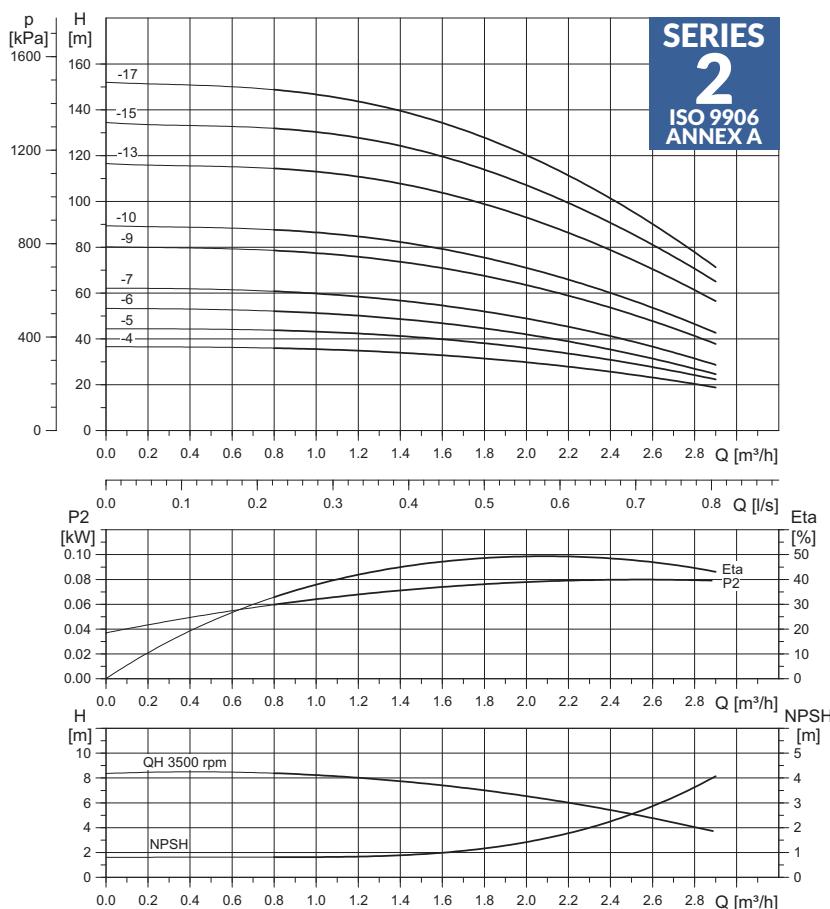

Fieldbus Protocol

Pumps can be fitted with the following communication cards: LON, Profibus, Modbus, GSM/GPRS & BACnet.

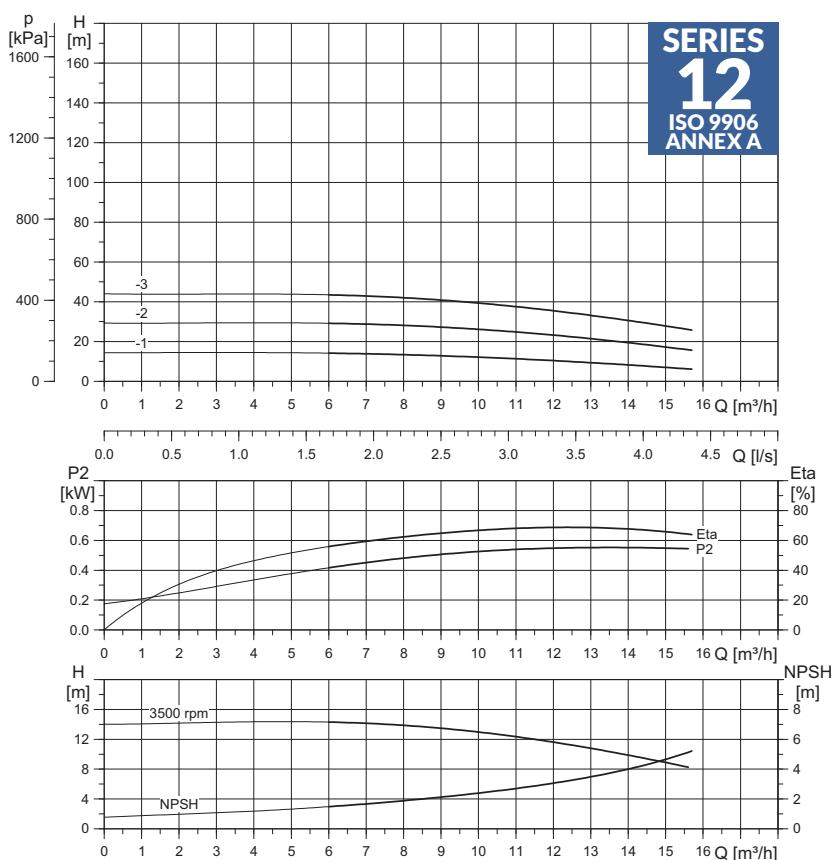

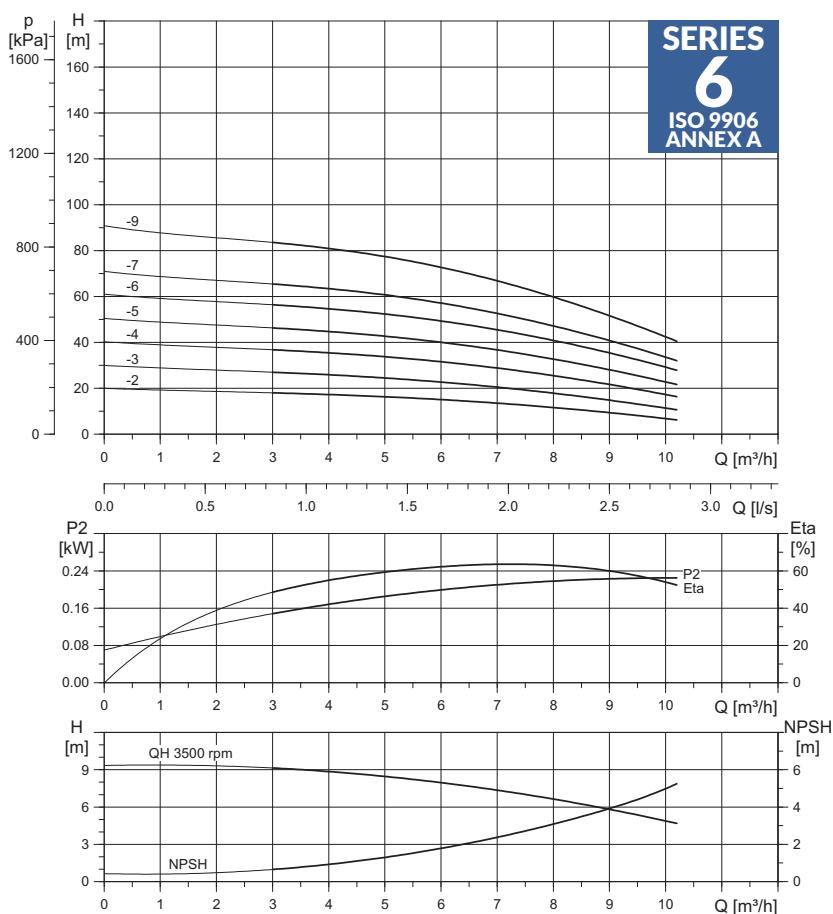

For further information relating to optional features, see data sheet 505.

Please feel free to discuss any special requirements with our sales team.

AQUAMATIC 'AMV' SERIES INSTALLATION GUIDANCE NOTES

ELECTRICAL

Units are designed for a 240 volt AC 1Phase 50Hz electrical supply for motors up to 1.5 kW and 415 volt AC 3phase 50 Hz electrical supply for motors above 1.5 kW. Electrical design and equipment conforms to BSEN 60204-1-1993 regulations, it is important that all subsequent wiring and protection equipment reflects this.

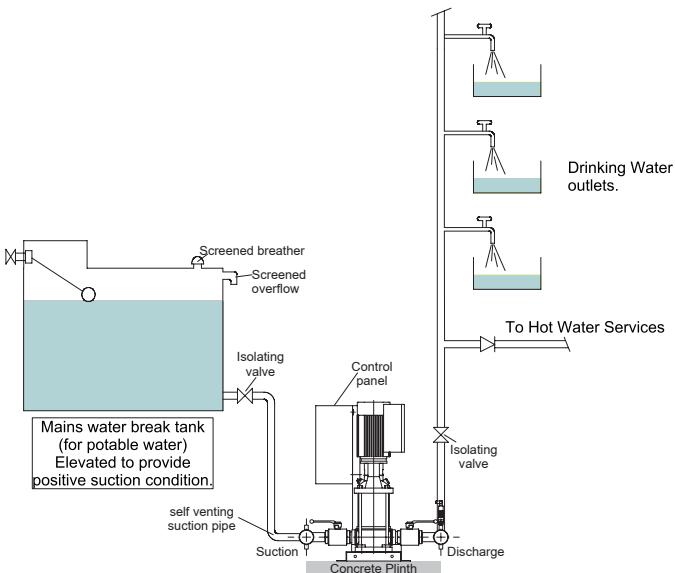

HYDRAULIC

The design of this unit enables it to be located in any position in a plant room with the minimum of inconvenience to pipework layout. Installer to fit isolating valves on break tank supply and riser to system. Note: Additional check valve/s should not be fitted on the suction or discharge pipework.

MECHANICAL

The unit should be mounted on a flat, slightly raised plinth and bolted down. AquaTech Pressmain recommend that when the unit is installed adequate room for servicing access is left around the unit. A gap of around 500mm is preferable. The selected pumps are designed for quiet operation and are virtually vibration free.

Typical pipework arrangement using variable speed cold water pressure booster set feeding hot & cold water services.

COMMISSIONING

Following electrical, hydraulic and mechanical installations as above, all units should be commissioned by AquaTech Pressmain service team.

CONSTRUCTION STANDARDS FOR AMV PRESSURE BOOSTER SETS

COMPONENT	MODEL/SERIES	STANDARDS/CLASS	REMARKS
Pumps	2 to 24	Vertical Multi-stage	WRAS Approved
Mechanical Seal	Carbon / Ceramic	DIN 24960	WRAS Approved
Motor for Pumps	TEFC	IP55, Class F Insulation	EuP Ready / Blueflux
Isolating & Non Return Valves	Ball Valve	PTFE Ball Seat	WRAS Approved
Suction & Discharge Manifolds	Stainless Steel EN1057 (304)	Entire unit WRAS Approved	Approval Number 0710086
Control Panels	CUI	IP55, BSEN 60204 part1:1998 89/3366/eec	CE Marked
Microprocessor	MGE Integral Drive	EN61800-5-1 / EN60034	CE Marked
Hydraulic Accumulators	Flow through	PED 9723EC	WRAS Approved
Quality System	ISO 9001	BSI Registered	CERT No. FM33090
