
HEATING & CHILLED SYSTEM PRESSURISATION UNITS

AQUAPACK AP SERIES

HEATING & CHILLED SYSTEM PRESSURISATION UNITS

AQUAPACK AP SERIES TWIN PUMP PRESSURISATION UNIT

with Microprocessor Control

Standard Features

- Boiler ratings up to 5000kW @ 82°C
- System contents up to 50,000 litres
- Temperature range up to 120°C (when using intermediate cooling vessel)
- Cold fill pressure 0.8 bar to 3.5 bar (AP3) or 3.5 bar to 7.0 bar (AP7) and 7.0 bar to 9.0 bar (AP9)
- Reliable 2020Plus Microprocessor/transducer control
- Boiler / Chiller safety interlock relay
- Audible alarm with mute & reset operates on high and low pressure
- Expansion vessels - max working pressure 10 bar and 16 bar
- Twin pump models with duty/standby pumps & automatic alternation of duty pump to even wear
- All models are Enhanced and are fully compatible with Building Management Systems
- Fluid category 5 (water supply regulations 1999)
- Designed and built to latest CE requirements and in accordance with ISO9001
- Leak detection via frequency of starts alarm

General

The Aquapack AP Series pressurisation unit is designed to maintain a minimum set pressure in a sealed heating or chilled water system. Once the system has been initially filled via an RPZ valve or quick filling loop, should the pressure fall below the cold fill pressure the unit operates automatically to restore that pressure. If high or low-pressure conditions should occur the boiler/chiller operation can be interrupted via the volt-free contacts provided. The unit is used in conjunction with a suitably sized expansion vessel from our Aquatank range of replaceable diaphragm vessels. All packaged equipment is manufactured in accordance with ISO9001 quality assurance procedures.

Standard Specification

Aquatech Pressmain AP Series heating or chilled water pressurisation unit. Suitable for cold fill pressures up to 3.5 bar/50psi AP3 and 7.0 bar/98psi with AP7 model and 9.0 bar/130psi with AP9 model.

Controlled by Aquatech Pressmain 2020Plus micro-processor controller with pressure transducer for long-term reliability and accuracy, non-volatile EPROM memory and data logging function.

Fully packaged unit incorporating; twin pressurisation pumps, auto change-over to even wear; Solid state pump drives with thermal overload protection; Automatic periodic pump pulsing to prevent pump seizure; Combined high/low system pressure cut-out relay volt-free contact; RS232 or 422/485 serial communications port; 18-litre mains water break-tank with 15mm float valve having a type AA air gap to Water Supply Regulations 1999; Fascia controls to provide indicating lights for each pump condition or status, run, hand, off, auto; "User friendly" Fascia keypad to enter & set operational parameters, reset alarm & mute; "Plain English" 2 Line LCD illuminated display.

Automatic cut-out and reset on tank low water level to prevent pump from dry running, 8 BMS Volt free relay connections, Fascia lights for pump tripped condition.

All controls contained within a powder coated sheet steel dust and damp proof enclosure to IP55.

Electrical Details

AP3 & AP7: 240 Volt AC, Single Phase, 50Hz
Max power 1.2kW, 12 Amp FLC

AP9: 415 Volt AC, Three Phase, 50Hz
Max power 4.4kW, 11 Amp FLC

60Hz versions are available on request.

AP OPTIONS

AP-DS Dual System Pressurisation Unit

As standard specification (above) but fitted with two sets of controls for operating two separate sealed systems. Each system is monitored and controlled independently with dedicated controls so each can have different working parameters while still utilising the dual pump arrangement.

Individual display and BMS monitoring are provided for each system.

AP-DG Pressurisation Unit with Vacuum Degasser

As standard specification above with integrated active vacuum degassing.

Fully automatic with digital step control to remove dissolved gasses from the sealed system. See back page for Model Guide.

QUICK SELECTION GUIDE with example

Example

4 storey building with 400 kW boiler power running at a temperature of 80°C Flow and 70°C return. The plantroom is on the ground floor.

From chart 1 'Superimposed' pressure at 80°C is 0.2 bar.

From chart 2 Static height is taken as 4 storeys at 3 metres per floor = 12 metres = 1.2 bar. Plus superimposed pressure of 0.2 bar (from chart 1) equals 1.4 bar, which is our low pressure alarm point. Add 0.2 bar for support pump start, plus 0.2 bar for duty pump start, plus 0.2 bar for duty pump stop. therefore cold fill pressure = 1.2 + 0.2 + 0.2 + 0.2 + 0.2 = 2.0 bar.

From chart 3 Cross reference 400 kW boiler power (assuming 10 litres per kW for system content) with 2.0 bar cold fill pressure, gives pressurisation unit model.

From chart 4 Cross reference 400 kW with boiler flow temperature of 82°C gives expansion vessel size 500VR.

Model selected Aquapack AP3, complete with 500VR expansion vessel.

CHART 1

EXPANSION & SAFETY PARAMETERS FOR HEATING PRESSURISATION UNITS

	FLOW TEMPERATURE °C	EXPANSION PERCENTAGE %	SUPERIMPOSED PRESSURE BAR
LTHW	40	0.78	0.2
	50	1.21	0.2
	60	1.71	0.2
	70	2.28	0.2
	80	2.91	0.2
MTHW	90	3.60	0.2
	100	4.35	0.3
	105	4.77	0.6
	110	5.15	0.9
	115	5.62	1.3
	120	6.01	1.7

*Must use intermediate cooling vessel. Consult with Aquatech Pressmain Sales Office.

AP SERIES DIMENSIONS

***For AP-DG versions this dimension is 600mm.**

All dimensions in mm unless otherwise stated. Alternate inlet/outlet positions must be requested at time of order. Extra cost may apply.

TYPICAL SCHEMATIC LAYOUT DIAGRAM

WORK REQUIRED ON SITE

Bolt unit to plinth or wall.
Connect 1/2" BSP (15mm) mains water supply.
Provide and fit 3/4" BSP (22mm) overflow pipe from break tank to suitable drain.

Wire single phase control supply onto terminals provided and boiler/chiller thermostat control circuits onto boiler/chiller relay within the control panel.
Connect Aquapack unit to system as installation instructions.
